

REMARKS

Claims 13-16 stand rejected under 35 U.S.C. § 102(e) as being anticipated by Song et al. (U.S. 6,657,695). Applicant respectfully traverses this rejection because the cited reference does not disclose (or suggest) the features of a second orientation control element extending from a first orientation control element. The width of the second orientation control element is smaller than the width of the first orientation control element.

As shown in Fig. 7, the Song et al. reference includes a protrusion pattern 15 and a second limb 152 extending vertically from the top end of the protrusion pattern. The protrusion 15 and the second limb 152 have the same width.

In contrast, the claimed second orientation control element of the present invention extends from the first orientation element and has a smaller width than that of the first orientation control element. This feature is not disclosed (or suggested) in Song et al. For this reason, claims 13-16 are allowable over Song et al.

For all of the above reasons, Applicants request reconsideration and allowance of the claimed invention. The Examiner should contact Applicants' undersigned attorney if a telephone conference would expedite prosecution.

Respectfully submitted,

GREER, BURNS & CRAIN, LTD.
